Hospital Health Plans

Health plan management specially designed for the provider community.

WebTPA's product offers healthcare providers intelligent solutions specially formulated to fulfill the unique needs of health systems and the communities they serve. We assist local providers in understanding not only the healthcare needs of employers in their communities, but also the health plan needs of their own employee population.

The WebTPA Advantage

- Consultative approach to managing provider-sponsored health plans
- Proven experience successfully managing custom benefit plans
- Focus on the unique needs of healthcare providers
- Accountability to each community we serve
- Flexible benefit plan design options and client-specific recommendations to ensure maximum value and effectiveness

Hospital Health Plans

Healthcare providers pride themselves on their commitment to the best patient care, striving toward the healthiest outcomes possible. But when it comes to administering an effective employee health plan, they look to benefit administration experts. That's where we come in.

Healthy Plans for Hospitals

WebTPA specializes in developing health plans specifically for healthcare providers and their employees. Our experience in this field gives us the unique perspective to understand how vital these providers are to the local community. We help our health system clients understand their own community's employer needs and ensure the most efficient use of the system as a whole.

The WebTPA Edge

With more and more regulation occurring in healthcare, hospitals are becoming more engaged than ever to ensure competitive and controlled products within their communities. WebTPA empowers local facilities and provider groups to effectively control healthcare dollars while better serving their communities.
